Executive Summary

Maine's Department of Health and Human Services – Maine Center for Disease Control and Prevention (Maine CDC) is authorized to certify hypodermic apparatus exchange programs in accordance to adopted rules that must require tracking of the numbers of hypodermic apparatuses distributed and collected and include procedures for safe syringe disposal and complaint investigations. Maine CDC is mandated to submit an annual report on certified hypodermic apparatus exchange programs, also referred to as syringe service programs (SSPs). (22 M.R.S. §1341). This 2024 annual report includes information about Maine's 10 certified SSPs, operating 21 SSP sites, including enrollment and utilization data and referral services.

The reporting period for this report is November 1, 2023, through October 31, 2024. SSPs reported close to 2,000 enrollments during this reporting period, more than 31,000 exchange events across SSPs and more than 92,000 referrals to services such medical care, clinics offering testing for sexually transmitted diseases (STD), HIV and hepatitis, substance use treatment, peer support, recovery coaches, overdose aftercare, food assistance, wound care, naloxone distribution, housing, transportation, health insurance benefits, mental health services, and other social supports. The largest number of referrals in 2024 (25,891) categorically related to basic needs, general assistance, food, housing, and rental assistance.

A Brief Overview of Syringe Service Programs in Maine

During the reporting period, Maine had 10 certified Syringe Service Program (SSP) sites operating in 21 locations in 10 of Maine's 16 counties in the communities of Augusta, Bangor, Calais, Ellsworth, Farmington, Lewiston, Machias, Milo, Portland, Rumford, Sanford, Strong, Waterville, and Westbrook. These 21 locations are operated by ten organizations: City of Portland, Church of Safe Injection, Commonsplace, Health Equity Alliance, Maine Access Points, MaineGeneral Medical Center, MaineHealth Franklin County Syringe Exchange, Needlepoint Sanctuary, Spurwink (previously TriCounty Mental Health Services), and Wabanaki Public Health and Wellness. The location in Portland, operated by the City of Portland, is Maine's first, opening in 1998. Currently, there are 21 operating certified sites in total in Maine. All certified SSPs are required to submit service data to Maine CDC on a monthly basis. This report summarizes data submitted by certified and operating SSP sites operating during the reporting period of November 1, 2023, through October 31, 2024.

2024 Highlights

In 2024, Maine's SSPs:

- Collected and disposed of 2,487,888 used syringes.
- Distributed 3,188,444 new syringes.
- Enrolled 15,949 participants, collectively.

- Enrolled 1,999 new participants, collectively.
- Made 92,983 referrals to services such medical care, STD clinics, HIV and hepatitis testing, substance use treatment, peer support, recovery coaches, overdose aftercare, food assistance, wound care, naloxone distribution, housing, transportation, health insurance benefits, mental health services, and other social supports.
- Conducted 526 HIV tests with syringe service program participants.
- Conducted 346 Hepatitis C Virus (HCV) tests with program participants.
- Provided naloxone (intramuscular and nasal spray) at 13,688 encounters.
- Distributed 16,439 xylazine test kits.
- Distributed 21,244 fentanyl test kits.
- Distributed 6,710 sharps containers (funded by SOR) of various sizes to date this year.

Rules, Policies, and Initiatives

Maine CDC, part of the Department of Health and Human Services (DHHS), is authorized by 22 M.R.S. c. 252-A, §1341(1) to certify hypodermic apparatus exchange programs, also referred to as Syringe Service Programs, to facilitate the prevention of bloodborne pathogens such as HIV (human immunodeficiency virus) and viral hepatitis. Pursuant to 22 M.R.S. §1341(3), this report reflects the syringe service activities conducted by 21 certified program sites operating in Maine for the period from November 1, 2023, to October 31, 2024.

Public Law 1997 chapter 340 established the authority for DHHS to certify Syringe Service Programs (SSP) that meet the requirements established by statute and specified in adopted program rules (10-144 CMR chapter 252). The statute was further amended when the 127th Maine State Legislature passed LD 1552, *An Act To Reduce Morbidity and Mortality Related to Injection Drugs* (Public Law 2015 chapter 507), directing the Maine CDC to allocate State funds to new and existing SSPs, but no funds were appropriated to support this mandate. Public Law 2017 chapter 464, *An Act To Reduce the Cost of Care Resulting from Blood-borne Infectious Diseases*, introduced as LD 1717, was enacted by the 128th Maine State Legislature, providing funds to support hypodermic apparatus exchange programs in the State.

In July of 2021, Governor Mills repealed statutory provisions and signed into law amendments that decriminalized the possession and furnishing of syringes with residual amounts of any scheduled drug and drug testing equipment. (Public Law 2021 chapter 434, introduced as LD 994, *An Act To Promote Public Health by Eliminating Criminal Penalties for Possession of Hypodermic Apparatuses*). It further removed language considering syringes as ‘drug paraphernalia’ (17- A MRS c. 434, §1106, §1107, §1110, and §1111(5)). Those changes went into effect on October 18, 2021.

In early fall 2021, through advocacy led by syringe service partners, Maine updated its *Syringe Services Programs Rule* (10-144 CMR chapter 252), formerly *Rules Governing the*

Implementation of Hypodermic Apparatus Exchange Programs. In September 2022, rule amendments were implemented by emergency rulemaking, which was followed by the adoption of routine technical rule changes in November 2022 (5 MRS §8054). These rule amendments supported harm reduction practices by removing stigmatizing language and easing burdensome administrative directives. These rules allow certified SSPs to exchange syringes via a 1:1+ strategy that better supports SSP program enrollees. If a client visits an SSP with no syringes to return, they can receive up to 100 syringes as needed or at the site’s discretion and considering its inventory. This effectively removes barriers associated with a strict 1:1 exchange policy and moves Maine closer to a needs-based exchange. Needs-based exchange, which imposes no restrictions on the number of syringes a client can receive, is considered best practice by US CDC as it decreases injection risk behaviors and reduces transmission of bloodborne pathogens by increasing accessibility of sterile syringes.¹

In December of 2019, the Governor’s Office of Policy Innovation and the Future released the *Opioid Response Strategic Plan* with the goal of “reducing the negative health and economic impacts of substance use disorder and opioid use disorder on individuals, families, and communities in Maine”.² Priority G includes increased support to enhance and build capacity of new syringe service partners. In 2023, Maine’s Opioid Response 2023-2025 Strategic Action Plan took effect. This Strategic Action Plan includes “Harm Reduction” as a focus area. Strategies within this focus area includes “Strategy 20: Ensure the availability of harm reduction resources and referrals to treatment and recovery supports for individuals at high-risk of overdose” which incorporates the objective to “expand SSPs through the licensing of additional Certified Syringe Service Providers and the use of mobile distribution and outreach, in both urban and rural areas.”³ In addition to putting forth this comprehensive Opioid Response Strategic Plan, Governor Mills announced \$1 million to support the purchase and distribution of xylazine test strips.⁴

In June 2023, Governor Mills signed into law *An Act to Support Public Health by Clarifying Authorized Activities Regarding Drug Checking*, introduced as LD 1745 and enacted as Public Law 2023 chapter 303. This bill addresses barriers of liability related to transportation and testing of drug samples and paraphernalia, and allows for the initiation of a drug checking pilot project to be conducted with 4 SSPs. The pilot is supported through funding from the Distribution of Harm Reduction Access in Rural Maine Areas Program and drug analysis

expertise at Colby College. This pilot program is in response to the urgent need for testing and drug checking due to increasingly dangerous substances in Maine’s drug supply.

In July 2023, Governor Mills signed LD 1364 into law, a resolution which directed the Governor’s Office of Policy Innovation and the Future to “convene a working group to study methods of preventing opioid overdose deaths by authorizing harm reduction health centers,” also known as Overdose Prevention Centers (OPCs). (Public Law 2023 chapter 120). The working group consists of 12 members from state and local government agencies as well as representatives from the recovery and harm reduction communities. Their work has focused on addressing the questions: 1) could OPCs work in Maine; 2) what is likely to happen if OPCs are allowed and established; 3) what could be changed in Maine law to make OPCs possible and 4) what else do lawmakers need to consider as they decide if and how to proceed. The group is scheduled to report out their findings to the state legislature in early 2025.

In January 2024, a cluster of HIV was recognized among people living in Penobscot County. By October 31, 2024, a total of 14 people were identified as HIV and Hepatitis C Virus (HCV) co-infected and were confirmed to be associated with the cluster. Further investigation has revealed that the locus of the cluster is in a population of people who use drugs (PWUD), primarily among individuals who are also currently or recently unhoused. DHHS is working closely with Penobscot County healthcare and public health partners, including SSPs, to respond to the cluster and support persons affected to receive HIV and HCV testing, care, and treatment. The role of local SSPs has been critical in the response to support testing and outreach to detect HIV and HCV infection and support linking affected persons to prevention, care, and treatment services.

Funding Syringe Service Programs in Maine

Building upon success with funding from previous years, in January 2022, Maine CDC was awarded \$1,000,000 through the [Opioid Use Disorder Prevention and Treatment Fund](#) to support SSPs through June 30, 2023. In 2023, the Opioid Use Disorder Prevention and Treatment Fund awarded \$1,920,000 for two years to support SSPs through 2025. This award is combined with LD 1707’s allocations of \$75,000 total annually for existing exchanges.

In addition to the aforementioned State of Maine general fund, (LD 1707 and Opioid Use Disorder Prevention and Treatment Funds), Maine CDC braided funding from federal grants to establish 2-year contracts with SSPs from July 1, 2023, to June 30, 2025. The ban on using federal funds to support SSP activities was lifted on January 6, 2016.⁵ SSPs are supported through these contracts at varying funding levels based on high acute hepatitis C disease burden and existing provision of services.

⁵ Centers for Disease Control and Prevention. Program Guidance for Implementing Certain Components of Syringe Service Programs, 2016 <https://www.cdc.gov/syringe-services-programs/media/pdfs/2024/04/cdc-hiv-syringe-exchange-services.pdf>

In late 2024, the Maine Recovery Council (the body established to direct the disbursement of Maine's opioid settlement funds) awarded each of Maine's certified SSPs \$75,000 a year per site for two years.

Stable and reliable funding for Maine's SSPs is critical to ensure financial sustainability and growth of organizations that serve many marginalized individuals in our communities. SSPs provide critically needed services throughout Maine, and while a modest increase in SSP sites is reported, the availability of SSP services does not appear to match the community need or are underutilized based on outbreak surveillance and reports of distance traveled for services.

Ten State-certified SSPs operated 21 sites in Maine during this reporting period:

- The City of Portland operates a site and provides outreach (as needed) in Portland.
- Commonsense operates one site in Portland.
- Down East AIDS Network/Health Equity Alliance operated sites in Bangor, Ellsworth, Deer Isle, and Rockland.
- MaineGeneral Medical Center Next Step Needle Exchange operates sites in Augusta and Waterville.
- Maine Access Points operates sites in Sanford, Rumford, Machias, and Calais.
- Spurwink operates a site in Lewiston.
- Wabanaki Public Health and Wellness operates a site in Bangor.
- Church of Safe Injection operates sites in Lewiston and Westbrook.
- Needlepoint Sanctuary operates primarily in Bangor and Milo.
- Franklin County Syringe Exchange operates sites in Farmington and Strong.

For agency-specific information and data, please see Appendices C through T.

Impact of Syringe Service Programs in Maine

Syringe Service Programs offer sterile syringes, which is crucial to reducing the risk of bloodborne infection, such as hepatitis B, hepatitis C and HIV, and prevent outbreaks.⁶ SSPs also offer a variety of harm reduction services that strengthen communities and support people who use drugs to promote their health and well-being. SSPs offer services such as: bloodborne pathogen testing, medication-assisted treatment (MAT) for opioid use disorder, linkage to care, case management, naloxone distribution, drug testing, peer support, social services, overdose prevention education, and treatment for hepatitis B, hepatitis C, and HIV.

Due to the wide range of services provided, SSPs have been shown to reduce new hepatitis C and HIV cases by an estimated 50%.⁷ New enrollees in SSPs are five times more likely to participate in a substance use recovery program and three times more likely to stop injecting drugs than

people who use drugs who are not enrolled in an SSP.⁸ SSPs help to prevent overdose deaths by providing naloxone to community members and program enrollees, and teaching enrollees how to recognize an overdose and administer that naloxone.^{9, 10, 11, 12, 13, 14} Evidence shows that SSPs reduce the number of discarded used syringes in communities.¹⁵

Viral hepatitis is a leading cause of liver cancer and the most common reason for liver transplantation among adults in the United States.¹⁶ According to the US Centers for Disease Control and Prevention's 2022 *Viral Hepatitis Surveillance Report*, Maine had the highest rate of acute hepatitis A and hepatitis C in the country and third-highest rate for acute hepatitis B.¹⁷ At the same time, Maine reported the seventh highest rate of opioid overdose deaths in the United States.¹⁸ Public health officials identified a link between the opioid epidemic and the spread of bloodborne infections such as HIV, hepatitis B, and hepatitis C.¹⁹ In Maine, as is nationwide²⁰, the highest risk factor for acquiring hepatitis B and hepatitis C is injection drug use. Viral hepatitis can be spread by sharing syringes, needles, and injection equipment, such as water, tourniquets, cotton, drug cookers, contaminated surfaces, or the drugs themselves. In 2023, 78 percent of drug death cases were attributed to nonpharmaceutical fentanyl.²¹ The number of drug

²⁰ Centers for Disease Control and Prevention. Syringe Services Programs Fact Sheet, <https://www.cdc.gov/ssp/syringe-services-programs-factsheet.html>

²¹ Maine Drug Data Hub, <https://mainedrugdata.org/>

deaths continues to remain high in 2023; however, Maine experienced a slight decrease in fatal overdose deaths from 2022 (total of 723 fatal overdoses) to 2023 (total of 607 fatal overdoses).²²

In Maine in 2023, 58 percent of acute hepatitis A cases indicated injection drug use, 33 percent of acute hepatitis B cases were people who injected drugs and 28 percent were people who used non-injection drugs.^{23, 24} For acute hepatitis C, 60 percent were people who used injection drugs and 48 percent were people who used non-injection drugs.²⁵

The COVID-19 pandemic greatly impacted disease burden among certain groups at increased risk of acquiring hepatitis A, such as people who use both injection and non-injection drugs, people who are unhoused or experiencing unstable housing, and people who are currently or recently incarcerated. Accessing hygienic supplies, housing, and vaccines was difficult for these groups during the pandemic and continues to be difficult. During 2023, Maine had multiple encampments of people experiencing homelessness and a total of 4,258 Maine people reported experiencing homelessness in 2023 according to the Maine Point in Time Count.²⁶ As of January 23, 2024, the total count of people experiencing homelessness in Maine was 2,695, showing an apparent decrease from 2023 numbers. While Maine's population is about 92 percent white, individuals from racial minorities comprised 51 percent of the 2024 Point in Time Count. Additionally, 377 of the adults experiencing homelessness reported having a substance use disorder.²⁷ SSPs worked to provide essential services, such as basic needs items, health care resources, linkage to care, and more. Delivering services to this population became difficult as encampments were frequently closed, and people living in these encampments were forced to seek alternative housing options. Many people living in encampments do not have a cellphone, reliable internet access, nor an address, making it difficult to deliver services where SSP staff can outreach and follow up on previous services.

2024 Syringe Service Program Data

In reviewing data provided in this report, to note, to ensure a level of confidentiality, protect the privacy of individuals represented in this dataset, and to reduce a potential barrier to accessing services, SSPs assign a unique identifier to a participant enrolling in services, also, there is no proof of identity required. Individuals may enroll in one or more SSP and be assigned a different ID. Each SSP collects and reports data which is then compiled at the program level. Data analyses includes unique records of service and exchange information reported by SSPs; statewide demographics may include duplicate participants.

Services

In 2024, SSPs reported, collectively, a total of 15,949 individuals enrolled in syringe service programming (Graph 5.1); SSPs reported 1,999 new participant enrollments in 2024 (Graph 6.1). (See Limitations further in this section of the report.) A total of 2,487,888 used syringes were collected and disposed of during 31,697 exchange events, defined as when an individual visits an SSP to exchange one or more used syringes and/or to receive support services (Graph 8.1 and Graph 7.1). In 2024, there were an average of 78 syringes exchanged per exchange event. Many SSPs serve as either Tier 1 or Tier 2 naloxone distribution sites through Maine Naloxone Distribution Initiative, serving as the driving forces of naloxone distribution in Maine.²⁸ Tier One Distributors distribute naloxone to Tier Two distributors, who then distribute to other organizations, institutions, and the community. There were 13,688 encounters where SSPs distributed naloxone directly. SSPs also distributed 16,439 xylazine test kits and 21,244 fentanyl test kits.

Despite operational challenges, many agencies in Portland, Lewiston, Westbrook, and Bangor were able to work collaboratively with their local jurisdictions to provide biohazard sharps disposal boxes in key hotspots in their respective service areas. SSPs provided educational brochures and communication from Maine's Department of Environmental Protection on safe disposal of household medical sharps. This expanded access points for safe disposal of syringes. SSPs also distribute sharps containers on site for participants that may not live near an accessible SSP so that these participants may safely dispose of their syringes at home. In 2024, they distributed 6,710 sharps containers of various sizes. Due to these other avenues for syringe disposal, not all syringes may be returned to an SSP for disposal as there are other more accessible routes for disposal.

SSPs frequently coordinate to host community outreach and syringe waste pickup events. SSPs are an essential resource for many clients, particularly those who are unstably housed, by providing hygiene kits, food, masks, hand sanitizer, and warm clothing to clients directly.

²⁸ Maine Drug Data Hub. Distribute Naloxone. <https://mainedrugdata.org/maine-drug-data-hub/distribute-naloxone/>

Referrals

SSPs provided 92,983 referrals to clients during exchange events during 2024, an increase from 2023 and the largest amount of referrals by SSPs ever recorded in Maine (refer to graph 2.1). SSPs refer clients to other organizations and providers, as well as to programs within the same SSP organization, as certified SSPs are often part of a larger organization or institution that offer a variety of services.

SSP clients received 4,498 referrals for testing and linkage to care for viral hepatitis, STD/STI, and HIV, and 2,377 referrals for health care providers, including dental care, and health insurance, and 3,030 referrals for substance use treatment, recovery services, and behavioral and mental health in 2024. The largest number of referrals in 2024 were 25,891 to basic needs, general assistance, and food, which also includes housing and rental assistance.

The top 10 most referred services for 2024, as demonstrated in Graph 2.2 were (in order from most referrals to least): basic needs and General Assistance, peer support, naloxone distribution and education, wound care, drug checking supplies and education, infectious disease (such as testing and linkage to care for HIV, STD, and viral hepatitis), overdose aftercare, substance use treatment and recovery (including behavioral and mental health), education support, and health care (medical care, dental care, and health insurance).

Demographics

Demographic data may be collected at SSPs; however, enrollees can decline to provide demographic information. Of the total 33,852 encounters where participants were served, only at 28,727 encounters (or 85% of total encounters) did participants consent to provide demographic information for ethnicity. The majority of program enrollees identified as Non-Hispanic/Latino, and only 3 percent of program enrollees identified as Hispanic/Latino (Graph 3.1). The majority of program enrollees identified as White (87%). 356 individuals (1%) as Black/African American, 250 (1%) as American Indian/Alaska Native, 503 (2%) as multi-race, 130 (1%) as other (Graph 3.2). Sixty percent of Syringe Service Program enrollees identified as male, 31 percent of enrollees identified as female, and 9 percent are unknown or other (Graph 4.1). Syringe Service Program enrollees also identified primarily as 26-49 years of age (80%), and only 11 percent as 50 years or older, and 9 percent as 18-25 years of age (Graph 5.1).

Limitations

There are two limitations noted with this report. First, individuals seeking SSP services can enroll at one or more SSP, resulting in the total number of enrollees likely including individual participants counted more than once if they seek services across the State. Exchanges/visits are counted separately and may include multiple exchanges/visits for one individual. (See Provider-Specific Data further in this report.) Second, in late 2023, Maine CDC implemented a new data collection process utilizing REDCap, an electronic reporting system, as the primary SSP reporting tool. For the 2023-2024 reporting period, SSPs were required to submit service data via REDCap. The transition to REDCap revealed inconsistencies in data reported between the last

reporting period (November 2022 – October 2023) and the current period (November 2023 – October 2024). In particular, the total enrollees from November 2023 – October 2024 does not equal the total enrollees from November 2022 – October 2023 plus new enrollees from November 2023 – October 2024. This is recognized as a data quality issue that could not be reconciled in discussion with SSPs and during data cleaning and analysis. Ongoing quality improvement technical assistance and data monitoring are a priority for 2025. Despite these limitations, this report accurately represents data reported by SSPs on syringe services delivered in Maine during 2023-2024.

Conclusion

Syringe Service Programs provided a wide variety of vital services to their communities from sterile syringes and disposal to testing for infectious disease. In 2024, Syringe Service Programs were able to dramatically increase referral services, demonstrating the continued need in the community, as well as the ability of SSPs to create trust and connections to services. In 2025, Maine CDC will continue to work with SSPs to build capacity and strengthen data collection systems and data quality.
